

PhD and ScD, Professor David Mikeladze, distinguished Georgian Neuroscientist, Biochemist, is a Member of Georgian National Academy of Sciences, Professor and Dean of Biology Faculty at Iv.Javakhishvili Tbilisi State University(2006-2008), Co-Director of the Institute of Chemical Biology at Ilia State University and the Head of Department of Biochemistry at Ivane Beritashvili Center of Experimental Biomedicine. The main research area of Pofessor Mikladze and his Group is the metabolism of neural and immune systems, bioenergetics and mechanisms of action of biologically active compounds, molecular basis of neuronal and immune pathologies, intracellular signaling and Biochemostrgy of Mitochondria in norm and under pathological conditions. Professor Mikeladze is a member of several international and national scientific societies and participant of several scienyific projects. Professor Mikeladze has close scientific collaboration with a n umber of Georgian and international scientific organizations and clinics regarding abivementioned scientific Professor Mikeladze is an author of more than70 scientific publications, published mainly in foreign prestigious jounals and editions and the member of editorial boards of several scientific journals.

Professor Mikeladze's some articles are:

Subcellular Distribution of S-Nitrosylated H-Ras in Differentiated and Undifferentiated PC12 Cells during Hypoxia. Barbakadze T, Goloshvili G, Narmania N, Zhuravliova E, Mikeladze D. Cell J. 2017 Oct;19(3):443-451.

Metabotropic glutamate receptor 5 may be involved in macrophage plasticity. Shanshiashvili L, Tsitsilashvili E, Dabrundashvili N, Kalandadze I, Mikeladze D. Biol Res. 2017 Mar 27;50(1):13. doi: 10.1186/s40659-017-0118-7.

Sigma-1 receptor directly interacts with Rac1-GTPase in the brain mitochondria. Natsvlishvili N, Goguadze N, Zhuravliova E, Mikeladze D. BMC Biochem. 2015 Apr 30;16:11. doi: 10.1186/s12858-015-0040-y.

Mitochondrial Target of Nobiletin's Action. Sharikadze N, Jojua N, Sepashvili M, Zhuravliova E, Mikeladze DG. Nat Prod Commun. 2016 Dec;11(12):1833-1838.

Nobiletin restores impaired hippocampal mitochondrial bioenergetics in hypothyroidism through activation of matrix substrate-level phosphorylation. Jojua N, Sharikadze N, Zhuravliova E, Zaalishvili E, Mikeladze DG. Nutr Neurosci. 2015 Jul;18(5):225-31

Knockdown of interleukin-10 induces the redistribution of sigma1-receptor and increases the glutamate-dependent NADPH-oxidase activity in mouse brain neurons. Koriauli S, Natsvlishvili N, Barbakadze T, Mikeladze D. Biol Res. 2015 Oct 9;48:55. doi: 10.1186/s40659-015-0048-1.

N-methyl-D-aspartate and sigma-ligands change the production of interleukins 8 and 10 in lymphocytes through modulation of the NMDA glutamate receptor. Kvaratskhelia E, Maisuradze E, Dabrundashvili NG, Natsvlishvili N, Zhuravliova E, Mikeladze DG. Neuroimmunomodulation. 2009;16(3):201-7.

Myelin basic protein charge isomers change macrophage polarization. Tsitsilashvili E, Sepashvili M, Chikviladze M, Shanshiashvili L, Mikeladze D. J Inflamm Res. 2019 Jan 23;12:25-33.
