

*Nadezhda Japaridze, PhD*, is a Neurocytologist, Leading Scientist of the Laboratory of Brain Ultrastructure and Nanoarchitecture at I. Beritashvili Center of Experimental Biomedicine and Professor of New Vision University. During years, Nadezhda Japaridze's uses different approaches of classical histology, immunocytochemistry, electron microscopy, behavioral tests and other techniques for the investigation of the structure of brain under various pathological conditions (the vitality of neurons and glia during fetal alcohol syndrome; short and long-term effects of alcohol and toluene chronic exposure in animals of different age-groups; the structural, ultrastructural and immunocytochemical modifications provoked by different forms of experimental epilepsy; the effects of different forms of stress on the structure/ultrastructure of brain, morphometric analysis for evaluation of structural/substructural modifications of brain, and porosome-mediated cell secretion).

**Professor Nadezhda Japaridze is a** co-principal investigator of PhD Program "Cellular Neuroscience", funded by Shota Rustaveli National Science Foundation and implemented AT Ilia State University and Ivane Beritashvili Center of Experimental Biomedicine. Nadezhda Japaridze is also co-principal investigator of a number of scientific and educational projects funded by national and international scientific foundations and co-organizer of several international symposiums, worksops and schools (Shota Rustaveli National Science Foundation, ISTC, FENS, Sigma Xi, UNESCO, Iowa State University, SENCER :PROGRAM, etc.).

Nadezhda Japaridze is the author and co-author of more than 20 articles published during last 10 years in international impact-factor journals and prestigious editions (Elsevier, Springer, Journal Discoveries, Singapore Publishing, Nova Publishing Corporation et al., and the presenter at more than 40 international scientific congresses, symposiums and conferences.

Some of Nadezhda Japaridze publications are:

Effect of propionic acid on the morphology of the amygdala in adolescent male rats and their behavior. Lobzhanidze G, Lordkipanidze T, Zhvania M, Japaridze N, MacFabe DF, Pochkidze N, Gasimov E, Rzaev F. *Micron*. 2019 Oct;125:102732. doi: 10.1016/j.micron.2019.102732. Epub 2019 Aug 6.

Electron microscopic morphometry of isolated rat brain porosome complex. Zhvania MG, Japaridze NJ, Qsovreli MG, Okuneva VG, Surmava AG, Lordkipanidze TG. *Neurosci Res*. 2015 Nov;100:17-20.

Ultrastructural changes to rat hippocampus in pentylenetetrazol- and kainic acid-induced status epilepticus: A study using electron microscopy. Zhvania MG, Ksovreli M, Japaridze NJ, Lordkipanidze TG. *Micron*. 2015 Jul;74:22-9.

The protective effect of myo-inositol on hippocamal cell loss and structural alterations in neurons and synapses triggered by kainic acid-induced status epilepticus. Kotaria N, Kiladze M, Zhvania MG, Japaridze NJ, Bikashvili T, Solomonias RO, Bolkvadze T. *Cell Mol Neurobiol*. 2013 Jul;33(5):659-71.

Hypokinetic stress and neuronal porosome complex in the rat brain: the electron microscopic study. Japaridze NJ, Okuneva VG, Qsovreli MG, Surmava AG, Lordkipanidze TG, Kiladze MT, Zhvania MG. *Micron*. 2012 Sep;43(9):948-53.

Hypokinetic stress and neuronal porosome complex in the rat brain: the electron microscopic study. Japaridze NJ, Okuneva VG, Qsovreli MG, Surmava AG, Lordkipanidze TG, Kiladze MT, Zhvania MG. *Micron*. 2012 Sep;43(9):948-53.

Immediate and persisting effect of toluene chronic exposure on hippocampal cell loss in adolescent and adult rats. Zhvania MG, Chilachava LR, Japaridze NJ, Gelazonia LK, Lordkipanidze TG. Brain Res Bull. 2012 Feb 10;87(2-3):187-92.
