

*Tamar Lordkipanidze* graduated from I. Javakishvili State University in 1984, with a bachelor's degree in Biology. In 2011, she received a Doctor's (PhD) degree in Biology from Ilia State University. She started her scientific career in 1985 at the I. Beritashvili Center of Experimental Biomedicine as a research scientist. Since 2008, she works at Ilia State University and currently holds the Associate Professor position at the Department of Natural Sciences and Medicine. The main interest of her work is morphology, ultrastructure, and underlying molecular processes in normal and pathological brain tissue. Her recent investigation was focused on the effect of heavy metals on the animal behavior and brain morphology and ultrastructure. Dr. Lordkipanidze has an international working experience, as she has worked for several years at Brown University (RI, USA) studying glia-neuronal interactions in the cerebellum, at Nebraska Medical Center (NE, USA) studying hippocampal spine motility and morphology in animal model of epilepsy, and at the University of New Mexico (NM, USA) as an invited scientist, investigating the ultrastructural changes following cerebral ischemia. She has participated in many local and international research conferences. Dr. Lordkipanidze has 26 publications in peer reviewed journals. Among them:

Georgi N. Gamkrelidze; Zaqaria I. Nanobashvili; Irina G. Bilanishvili; Tamar Lordkipanidze; Manana Kandashvili; Merab Kokaia and Revaz O. Solomonias. Concentration- and time-dependent effects of myo-inositol on

evoked epileptic afterdischarge in the hippocampus *in vivo*. NeuroReport 2019, Nov 6; 30(16):1129-1134.

[Effect of propionic acid on the morphology of the amygdala in adolescent male rats and their behavior.](#) Lobzhanidze G, Lordkipanidze T, Zhvania M, Japaridze N, Pochkhidze N, Gasimov E, Rzaev F. Micron. 2019 Oct;125:102732. doi: 10.1016/j.micron.2019.102732

Lia Tsverava, Manana Kandashvili, Giorgi Margvelani, T Lordkipanidze, Giorgi Gamkrelidze, Eka Lepsveridze, Merab Kokaia, and Revaz Solomonias. Long-term effects of myo-inositol on behavioural seizures and biochemical changes evoked by kainic acid induced epileptogenesis. BioMed Research International. 2019 Feb 28;2019:4518160. eCollection 2019.
